BYD will equip the charging stations with energy storage systems, allowing them to deliver 1,000 kW of charging power even in areas where the local grid cannot supply enough electricity.

BYD, a dominant player in China's EV market, unveiled its 1000kW charger on March 17, 2025, as part of the Super E-Platform. This platform supports ultra-high voltage (1000V) and current ...

Chinese automaker BYD has introduced a groundbreaking electric vehicle (EV) battery that can charge as fast as refuelling a gasoline car. The announcement, made during a major event ...

BYD is making EV fast charging as quick as refuelling ICE. They have introduced two new EVs on the Super e-Platform that support 1000kW DC charging.

Sessions covered keynotes, panels, and fireside chats on today's most pressing topics, from regulatory shifts and market trends to operational excellence, cutting-edge technologies, and real-world...

Versatile energy storage for commercial and industrial applications. The demand for power, and variation in the demand, continues to increase due to end-user loads and electrification, including the ...

The platform upgrades the core electric components, achieving a charging power of 1 megawatt (1000 kW) and a peak charging speed of 2 kilometers per second, making it the fastest for ...

Electric vehicles built around its new Super E-Platform are able to "fill up" as quickly as you can tank-up your petrol vehicle. Launched this week in China the new architecture and matching...
