SmartRack™; Modular Data Centers are composed of IT rack, cooling and service enclosures that together form a performance optimized data center, or POD. This innovative design enables easy ...

The Vertiv(TM) DCE Rack System is designed to meet the flexibility, ease of installation, and delivery requirements of modern data centers, and is available in pre-configured or customized builds.

One of the most critical aspects of this design is area sizing per rack, which directly impacts efficiency, scalability, cooling performance, and operational safety.

As data center managers strive to make use of valuable space, racks are more fully filled than ever. While high density configurations can enhance energy efficiency, they also create a need for effective ...

While a standard rack uses 7-10 kW, an AI-capable rack can demand 30 kW to over 100 kW, with an average of 60 kW+ in dedicated AI facilities. This article provides a condensed analysis ...

The datacenter industry has witnessed a dramatic transformation in rack power density over the past 25 years, accelerating from gradual increases in the virtualization era (5-15kW) to ...

For 20+ years, Switch has been designing, building & operating the world's highest density data centers. Switch is purpose-built to handle the demands of next-gen AI.

Introduction The data center industry underwent unprecedented transformation in 2024, driven by historic absorption rates from hyperscale operators and the rapid advancement of artificial ...
