---

We expect the combined share of generation from solar power and wind power to rise from about 18% in 2025 to about 21% in 2027. In our STEO forecast, utility-scale solar is the fastest ...

By 2030, the global power grid will be transformed, dominated by clean, sustainable, and affordable energy solutions. From solar and wind energy to smarter grids and efficient storage, the ...

By 2030, renewables are poised to supply nearly half of global electricity, with solar and wind leading this explosive expansion. In this data-driven piece, we explore job creation forecasts, ...

Explore the roles of policy, market growth, and challenges like grid upgrades and material supply, revealing how solar power may transform our energy future and drive a low-carbon world.

The world invested a record high US\$570 billion in renewable energy in 2023, but this is just over one-third of the US\$1.5 trillion annual investment target set by IRENA to meet the 2030 goals.

Higher retail electricity prices following the energy crisis, along with strong policy support, have encouraged individuals and businesses to install solar PV systems with the aim of reducing their ...

The pages that follow lay out how the solar industry will expand exponentially from comprising 3.7% of the U.S. electricity mix today to 30% of all electricity generation by 2030.

Recent forecasts for the solar industry under a business-as-usual scenario would place solar at roughly 15% of electricity generation in 2030, but with bold policy action and continued ...
