With global energy demand projected to grow 50% by 2050 (International Energy Agency, 2023), the \$8 billion investment in wind power and energy storage solutions represents a pivotal shift toward ...

Dozens of large-scale solar, wind, and storage projects will come online worldwide in 2025, representing several gigawatts of new capacity.

Egypt's renewable energy sector today produces 8,866MW of power from wind, solar and hydroelectric sources, Energy Minister Mahmoud Esmat said in December. Since July 2024, Egypt ...

Solar, wind and battery storage are forecasted to provide 99% of new electricity generating capacity in 2026 according to new data released by the Energy Information Administration.

A consortium led by Saudi utilities giant ACWA Power is to invest \$8.3bn to build 15 gigawatts of solar and wind farms in the kingdom as it accelerates its push into renewables.

Strong and sustained policy support has enabled these countries to take advantage of low cost solar power, accompanied by significant wind and bioenergy investments, and the development of Brazil's ...

Canadian investment in wind, solar, and energy storage is forecast to top \$200 billion over the next decade, leading to a significant decline in the emissions intensity of electricity production, ...

In 2026, developers are likely to accelerate solar-plus-storage to serve hyperscaler demand, diversify revenue to manage volatility, and position early in long-duration and distributed storage for the next ...
