Australia is in a slightly strange moment on renewable energy. From one perspective, it is embracing renewables, and solar in particular, what by any measure is a historic pace.

On Australia's main grid last quarter, renewables and energy storage contributed more than 50% of supplied electricity for the first time, while wholesale power prices were more than 40% lower ...

Solar and battery storage will do the heavy lifting on the path of decarbonising Australia's electricity system, AEMO predicts.

In 2024, 36% of Australia's total electricity generation was from renewable energy sources, including solar (18%), wind (12%) and hydro (5%). The share of renewables in total electricity generation in ...

The projected increase comes as the Australian Energy Market Operator (AEMO) on Monday (29 October) revealed that over 45GW of solar PV, wind and energy storage projects are ...

Our Rooftop solar and storage report, July to December 2025 shows a record 183,245 batteries were sold in Australia in the second half of 2025 alone. This figure is more than the ...

Battery storage is now key to Australia's clean energy transition. It stabilizes supply by storing extra renewable energy and delivering it on demand, even when solar or wind output drops.

Reviewing wholesale market settings in Australia's largest grid, the National Electricity Market, to promote investment in renewable generation and storage capacity beyond 2027.
