Amid fits and starts, Australia's energy transition turned a big corner in 2025, as renewables shot past fossil fuels despite demand records.

Investment in new large-scale solar and wind in Australia fell by 64% year on year in the first half of 2025 as grid bottlenecks, slow planning approvals, higher costs, and social licensing...

A number of states have set up schemes to encourage the uptake of solar PV power generation involving households installing solar panels and selling excess electricity to electricity retailers to put ...

Investment in large-scale solar and wind generation slumped in 2025 to less than half of the previous year's capacity, in a fresh hit to the Albanese government's goal of generating 82 per ...

Australia is on track to overshoot its 2030 rooftop solar targets, with enthusiasm for panels and batteries offsetting drops in broader renewable investment and large projects.

OverviewProjectsInstallations by typePotentialIncentivesSupply chainRenewable energy targetsSee alsoProjects with a power rating less than 100 MW are not listed. A 20 MWp solar power plant has been built on 50 hectares of land in Royalla, a rural part of the Australian Capital Territory south of Canberra. It is powered by 83,000 solar panels, and can power 4,400 homes. It was officially opened on 3 September 2014. It is the first solar plant facility in the Australian capital, and at the time of building the l...

Discover key solar energy trends for 2025 in Australia, including panel efficiency, battery adoption, large-scale solar farms, and rooftop solar growth.

The politics remains shaky, but strong investment in solar, wind and energy storage in the final quarter of 2024 has put Australia back on track for renewables target.
