With a grid reliability of over 99.99%, Austria's security of supply is among the best in the world. Key factors for this stability are the good coordination among grid operators at a national and international ...

To optimize the use of existing grid infrastructure, the EIWG formally introduces peak shaving (Spitzenkappung) as a legal right of grid operators. Grid operators can limit the feed-in ...

The project enhances grid stability and enables the flexible use of renewable energy, reducing fossil fuel dependency and marking a strategic milestone in Austria's energy transition.

One of the key benefits of the new battery storage facility is the stabilization of the electricity grid through quick reactions to fluctuations. It also stores surplus energy from renewable ...

In Austria, ensuring grid stability is the job of Austrian Power Grid (APG), which operates the upstream European electricity network in cooperation with transmission system operators (TSOs) from other ...

This grid facilitates the supraregional exchange of energy between producers and consumers and serves to ensure the stable provision of energy to the underlying distribution grids. For more ...

"The scale of the targeted interventions in the power plant fleet during August clearly exposes the shortcomings in grid infrastructure and the lack of transmission capacity," said Gerhard ...

Liberalisation of the electricity market and the growing proportion of renewable energy are placing grids under increasing pressure. This is where congestion management comes in, dealing with impending ...
