As Latin America's largest economy steps closer to mainstreaming battery energy storage, the world will be watching how Brazil balances ambition with regulatory clarity -- and ...

Brazil's decision to hold a BESS auction could push storage projects forward and support the wider use of renewables, particularly solar and wind, which have become increasingly crucial for ...

The auction will enhance Brazil's power grid reliability by integrating energy storage solutions for electricity generated from renewable sources such as wind and solar.

Generation curtailments remain a major challenge for Brazil's renewable sector. In 2025, an estimated 15% to 20% of solar and wind generation will be curtailed, with only 5% compensated.

But hold onto your caipirinhas--this South American giant is fast becoming a hotspot for new energy storage projects. With abundant sunlight, ambitious climate goals, and a hunger for grid stability, ...

The rising demand for battery energy storage systems (BESS) is primarily fueled by the need to enhance grid stability and integrate intermittent renewable sources like wind and solar.

The pipeline of utility-scale solar PV projects in the country can be a significant driver of demand for grid-scale energy storage. This is because hybrid projects that combine solar and storage configurations ...
