BNEF's analysis is based on green hydrogen produced locally in the Philippines using clean electricity from solar, wind and with energy storage. Thanks to the country's domestic renewable resources, ...

"By shifting to renewable energy (RE) sources such as solar, wind, and hydropower, we can aim for a more stable and affordable power supply, and a more sustainable future for all ...

MANILA, Philippines -- The Philippine government's push for more renewables is taking shape, with more than 11,000 megawatts (MW) of clean energy capacity expected to be online by 2030.

With the recently announced moratorium on greenfield coal plants, along with a firm commitment to the implementation of various renewable energy policies and the Green Energy Auction, clean energy ...

The Philippines' power sector emissions have tripled in the last two decades as coal generation has met rising demand. The Philippines aim for 35% renewable electricity by 2030, which is below the global ...

By converting millions of tons of trash into clean, renewable energy, we aim to reduce landfill dependency, prevent waste-induced flooding, and strengthen the country's energy security.

Despite the barriers that prevent the Philippines' transition to renewable energy, the Philippines should utilize its abundant resources, take action by actively addressing the issues at ...

In other words, the fuel for these plants needs to be as clean as the power they produce. It's about setting the stage for long-term success, one properly sorted trash bin at a time.
