China has significantly increased its coal power capacity, reviving concerns about its climate-changing carbon emissions.

Yet at the same time, reports describe how China Leads Global, with plans to commission as many as 85 coal-fired power generation units and a large pipeline of coal power capacity under construction.

China's installed solar power capacity is projected to surpass coal-fired capacity for the first time this year, marking a major milestone in the country's energy transition and reinforcing its status ...

The massive growth in wind and solar begs the question: why is China still building coal power plants and, by most analyses, way more than it actually needs? The answer is complicated.

Two possible options are explored here: combining solar energy with coal-fired power generation, and cofiring natural gas in coal-fired plants. Both techniques show potential. Depending ...

China has significantly increased its coal power capacity, reviving concerns about its climate-changing carbon emissions BEIJING -- Even as China's expansion of solar and wind power ...

This paper reviews the recent research progress of solar aided coal-fired power generation systems, including integration schemes, analytical methods, optimization methods and engineering ...

LITTLETON, Colorado, Dec 9 (Reuters) - For the first time, Texas' main power system looks set to generate more power from solar farms than coal plants during a calendar year in 2025,...
