What is the signalling tester md8475b?

The Signalling Tester MD8475B is a base station simulator reproducing communications between base stations and UEs. It supports the full range of communication standards including LTE, and the Anritsu SmartStudio user interface, eliminates the need to create complex test scenarios, assuring efficient tests of complex UEs.

What technologies can be tested using the md8475b?

All the world's main communications technologies, such as triple-system LTE/W-CDMA/GSM mobiles and TD-LTE/TD-SCDMA/GSM as well as LTE hybrids, can be tested using the all-in-one MD8475B. (Requires installation of optional units and software for each systems).

Can smartstudio be used as a base station?

Not only does SmartStudio support frequency band and Tx and Rx power settings, it can also be set to behave as a real base station. Up to 32 base station parameters can be saved in one file to prevent setting errors and assure fast, smooth testing when making slight changes to frequency and bandwidth before retesting.

Anritsu's Signaling Testers, also known as base station simulators, support a wide range of communication standards including 2G, 3G, 4G (LTE/LTE-A/LTE-A Pro) and 5G.

Base Station Test Sets and other new and used Communication Analyzers products from Test Equipment Center.

The MD8475B Signalling Tester by Anritsu is an all-in-one base station simulator ideal for performance, functional, and IMS service testing of multimode mobile terminals.

It provides everything needed to install and maintain communication networks in a rugged, field portable package. This test solution can be used to verify fiber installation and fiber loss characteristics.

The Signalling Tester MD8475A is an all-in-one base station simulator supporting LTE, LTE-Advanced, W-CDMA/HSPA/HSPA Evolution/DC-HSDPA, GSM/EGPRS, CDMA2000 1X/1xEV ...

The Signalling Tester MD8475B is an all-in-one, high-performance base station simulator supporting various mobile communications technologies ranging from 2G to LTE-Advanced.
