Solar thermal power plants produce electricity in the same way as other conventional power plants, but using solar radiation as energy input. This energy can be transformed to high-temperature steam, to ...

Thus, this paper describes the thermal modeling of the propulsion system of a solar-electric high-altitude aircraft, with a particular focus on the battery system and solar panels.

The wing-mounted solar cells generate power during flight and recharge the battery on the ground between missions. The solar cells are assumed to cover a fixed proportion of the overall wing area.

Our research was focused on preparing a novel design for a quadcopter using lightweight composite material and evaluate how solar power can be used to increase its overall flight time.

In solar thermal power generation, solar collectors are used to collect the heat from the incident solar radiation. The heat extracted from the solar collectors is employed in the ...

The model includes the quadcopter's dynamics, solar panel power generation, and energy storage system.

At Airbus, we are working to use this alternative renewable energy source to power high-endurance stratospheric flight. Our advances in solar cell technology enable unmanned aerial vehicles to stay ...

The Solarcopter project demonstrated the potential of solar power in multi-rotors by proving that a quadrotor design can fly utilising the sun's power directly.
