How much does an off-grid solar system cost?

An off-grid system costs between \$45,000 and \$65,000, with an average price closer to \$55,000. Cost varies based on your system size, type, and energy needs, as well as the components you choose. How long do off-grid solar systems last? An off-grid system can last 25 years or more with proper maintenance.

Is an off-grid Solar System a good option?

Off-grid systems are excellent options for remote homes and recreational vehicles. They also work for homeowners who want energy independence or more eco-friendly power options. How much does an off-grid solar system cost?

Why is an off-grid system more expensive than an on-grid system?

Since your off-grid system must provide power for your entire home, it will be larger and more expensive than an on-grid system. On-grid systems are built to support energy needs but do not serve as your only electricity source. This means they're smaller and cost less than off-grid options.

How do market analysts evaluate the cost of PV systems?

Market analysts routinely monitor and report the average cost of PV systems and components, but more detail is needed to understand the impact of recent and future technology developments on cost. Consequently, benchmark systems in the utility-scale, commercial, and residential PV market sectors are evaluated each year.
