How much does grid interconnection cost?

Several separate data-files were last released in mid-2023, and we have aggregated them here, then added our own analytics and observations. The cost of grid interconnection has averaged \$138/kW across 3,382 projects in the database, which breaks down as \$51/kW for thermal power plants, \$138/kW for wind projects and \$167/kW for solar projects.

How much does a grid upgrade cost?

A good baseline is to expect \$100-300/kW of grid inter-connection costs, or \$3-10/kW-km, over a typical distance of 10-70 km. But the requirement to fund network upgrade costs can push grid connections to cost more than developing renewables projects themselves?!

Why do States use interconnection and net metering policies?

States use interconnection and net metering policies to integrate customer-sited, distributed energy resources (DERs) into the electric grid or to encourage greater investment in these resources.

How many new generation and storage projects require interconnection?

This study analyzes interconnection cost data from 194 projects that were evaluated in interconnection studies between 2010 and 2021, including at least 55% of all new generation and storage projects requesting interconnection to the ISO-NE system during 2010-2019. This sample is based on all available studies on ISO-NE's website as of May 2022.

We also analyzed the costs associated with thermal, voltage, and protection impacts as well as costs to expand the existing infrastructure to physically interconnect the system to the grid.

We evaluate the drivers of this bottleneck using data from all regions across the United States. Across the regions studied, assessed interconnection costs have increased over the last ...

Monitor and evaluate net metering and interconnection programs to inform policy adjustments as economic costs, technology, and grid needs evolve, and in response to participation levels and ...

Electricity products Interactive data tools Electricity Data Browser Interactive data query tool of charts and maps with data for generation, consumption, fossil fuel receipts, stockpiles, retail sales, ...

As a rule of thumb, 25% of the cost is direct cost, while 75% is the requirement to fund network upgrades, per

our note here. The cost of grid interconnection has increased substantially over time.

Once these factors have been considered, a detailed cost estimate can be developed for the grid connection project. This estimate should include all of the costs associated with the project, including ...

Compare today's residential and commercial electricity rates, plans, and offers from energy providers across the United States.

This essay will delve into the intricacies of grid connection fees, examining their determinants, the process involved in their assessment, and the various challenges and considerations that arise.
