In 2023, the U.S. electric power sector produced 4,017 billion kilowatthours (kWh) of electric power. Renewable sources--wind, solar, hydro, biomass, and geothermal--accounted for ...

The latest report from the US Energy Information Agency predicts solar and BESS will account for 80% of new electricity capacity in 2024.

Solar continues to be the main fuel type for new additions, with over 30,000 MW of solar energy added in 2024, nearly double the amount added in 2023. This report also analyzes prospective generation ...

Lawrence Berkeley National Laboratory compiled and synthesized empirical data on the U.S. utility-scale solar sector.

The US clean electricity transition continued as wind and solar generated more than coal for the first time. Electricity demand growth sped up and solar generation rose more quickly than gas ...

Solar projects are making it easier for Americans to choose solar energy to power their homes. Department of Energy Since 2008, hundreds of thousands of solar panels have been installed across ...

About this data Share of electricity generated by solar power Measured as a percentage of total electricity produced in the country or region.

Solar continues to dominate new electricity generation capacity added to the grid in the United States, according to the Energy Information Administration's (EIA) latest release of its Electric ...
