determine the installation location's basic wind rating speed. While most of the United States has a basic wind rating speed of 110 miles per hour, special regions, particularly along the Atlantic and Gulf ...

This Information Sheet discusses the special factors and planning that must be considered when supplying generators in enclosures, that are installed outdoors in such regions.

Instant wind speed determination for any US location using zip code, address, or GPS coordinates

Quickly retrieve site structural design parameters specified by ASCE 7-10, ASCE 7-16, and ASCE 7-20, including wind, seismic, snow, ice, rain, flood, tsunami, and tornado.

The Global Wind Atlas is a free, web-based application developed to help policymakers, planners, and investors identify high-wind areas for wind power generation virtually anywhere in the world, and then ...

The various design code wind speed zones have been digitized and rebuilt as this interactive wind speed map for engineers to get accurate wind speeds by locations.

WindSpeedByZip is a professional tool for Architects, Engineers, and Builders to determine ASCE 7-05, 7-10, 7-16, and 7-22 design wind speeds for any site-specific location.

Understanding your property's landscape helps you identify safe generator placement zones--areas where wind naturally carries exhaust away from windows, doors, and vents.
