Where are Georgia Power's new gas turbines being built?

In addition to the new turbines at Plant Yates, Georgia Power also is planning to construct new gas units at Plant Bowen near Cartersville, Plant Wansley near Carrollton, and Plant McIntosh near Rincon.

Does Georgia Power have a Bess project?

Georgia Power continues to work with the Georgia PSC to integrate BESS technology across the state. BESS projects support the overall reliability and resilience of the electric system, while also enhancing the value of intermittent renewable generation resources such as solar.

Why is Georgia certifying 5 new combined cycle units?

This week's filings include the request to certify five new combined cycle (CC) units, totaling 3,692 MW, to be strategically located across the state to help ensure grid stability and reliability, and supporting the state's economic growth in the coming years. Projects submitted to the Georgia PSC include:

Does Georgia Power use natural gas?

Georgia Power continues to incorporate cleaner natural gas into its diverse generation mix to reliably and affordably serve customers.

According to Georgia Power, approximately 80% of the projected energy demand is expected to come from data centers, rather than residential customers. This has raised questions ...

The power company sought large-scale solar projects, including those paired with battery storage, providing up to 2,000 megawatts of new capacity.

The list of projects includes previously approved new gas turbines to be built at Georgia Power's Plant Yates near Newnan and Plant McIntosh near Savannah, as well as a request for five ...

Georgia Power has received delivery of the first of three new gas turbines at Plant Yates near Newnan, the Atlanta-based utility announced Friday. The turbine was assembled by Mitsubishi ...

The request includes power purchase agreements (PPAs) from existing resources, as well as new company-owned natural gas generation, battery energy storage systems (BESS), and BESS ...

While natural gas is 40-50 percent of our generation capacity, the share of generation produced from carbon-free or carbon-neutral sources is growing steadily with the completion of Vogtle Units 3 & 4 ...

Georgia containerized power generation

Source: <https://studioogrody.com.pl/Sun-03-Nov-2019-15757.html>

For decades, Oglethorpe has utilized its diverse portfolio of generation assets to steadily generate millions of megawatt-hours of reliable, efficient, and affordable power for the Peach State's ...

Georgia Power is building three new CTs at Plant Yates that were approved by the Georgia Public Service Commission (PSC) in the 2023 Integrated Resource Plan (IRP) Update and, ...
