Neuhardenberg Solar Park is a 145- megawatt (MW) photovoltaic power plant, and was Europe's largest solar power station, located at the former Neuhardenberg military airport in Brandenburg, Germany.

In a few months, Germany's biggest photovoltaic power plant will become operational. At the moment, two-thirds of the panels have been installed. The German renewable energy company Juwi is ...

In total, over 850,000 modules from the manufacturer First Solar will be installed on the former military grounds. The investment will not only secure the energy supply of approximately 18,000 households, ...

To ensure safety, the microwave beam is kept within strict power density limits and is auto-terminated if alignment drifts. The receiving rectenna converts the signal directly into DC power ...

To ensure safety, the microwave beam is kept within strict power density limits and is auto-terminated if alignment drifts. The receiving rectenna converts the signal directly into DC power for grid use.

The conversion of former ammunition depots to solar parks in Bavaria shows the change from military to civilian, sustainable use. The world's largest solar park in Hemau was a pioneer of ...

The Waldpolenz Solar Park is a 52-megawatt (MW) photovoltaic power station built by German developer and operator Juwi at a former military air base near Leipzig, Eastern Germany. When completed by the end of 2008, it was the world's largest thin-film solar park using CdTe-modules. Initially, the solar power plant's nameplate capacity was 40 MW, consisting of 500,000 ...

German solar developer and independent power producer Enerparc AG has inaugurated an 80-MWp solar cluster on the site of the former NATO airport in Eggebek, northern Germany.
