The Bangkok Energy Action Plan includes the implementation of solar power systems, Wi-Fi-enabled smart light bulbs, and other Internet of Things (IoT) devices. These technologies are ...

Thailand's gas-fired power infrastructure, underpinned by long-term contracts and approved investments, may limit flexibility to integrate cleaner energy sources and increase exposure ...

Instead of adding more thermal power plants, Thailand needs to consider an orderly phase out of its thermal power plants in coordination with expansion of clean power sources. To overcome variability ...

Bangkok's metro system is going green as CK Power and Bangkok Expressway and Metro PLC team up to power two key lines with solar energy. Covering over 106,000 m² across six ...

Despite progress, challenges remain, including reliance on natural gas, infrastructure constraints, and the need for workforce reskilling. Strategic investments in renewable energy, electric ...

Greenergy (Thailand) is a distinguished Engineering, Procurement, and Construction (EPC) enterprise, specializing in the holistic development, design, construction, operation, and maintenance of solar ...

Discover how Thailand is revolutionising its energy sector by transitioning to renewables like solar, wind, and hydro to achieve carbon neutrality by 2050.

By 2030, Thailand's renewable energy capacity is expected to reach 21,403 MW, powered largely by solar PV, biomass, and floating solar systems. Rooftop solar is also expanding fast, with ...
