Do Europe's grids need more resilience?

"Europe's grids need more resilience finds ENTSO-E's April blackout investigation", Smart Energy International. Retrieved 21 July 2025. ^ a b Fraunhofer ISE (6 May 2025).

How many GW of electricity did the European grid supply?

At 12:30 on 28 April, the grid was supplied with 32 gigawatts (GW) of power to meet 25 GW of demand, and was exporting 2.6 GW to Portugal, 0.87 GW to France and 0.78 GW to Morocco. The remainder was used for hydropumping (3 GW). More than half of the power supply was from solar, and electricity price was slightly negative.

What will the Iberian power panel's final report mean for Europe?

Furthermore, in the final report, the Expert Panel will make recommendations aimed at preventing similar incidents from occurring in the future, not only in the Iberian peninsula but across the whole European power system. The final report is expected to be delivered in Q1 2026.

Why did Spain's nuclear lobby oppose a phase-out plan?

"Spain's nuclear lobby urges review of phase-out plan following blackout", Reuters. Three reactors out of seven were not in operation, two of them because the abundance of renewables has lowered energy prices, making it too expensive to operate the reactors.

This paper presents a European-wide techno-economic and environmental assessment of retrofitting 5G macro-cell base stations with grid-connected solar photovoltaic ...

It describes the system conditions that prevailed on 28 April 2025, provides a detailed sequence of events during the incident and describes how the system was restored after the incident.

Open map of the world's electricity, telecoms, oil, and gas infrastructure, using data from OpenStreetMap.

On Friday, 21 June 2024, a significant incident occurred in South-East Europe (SEE), leading to a major disruption in the Continental Europe (CE) power system.

As with the Canary Islands, the distant island regions of Madeira and the Azores in the Atlantic Ocean have

Has the inverter of the Eastern European communication base station been restored to the grid

never been connected with the European grid, and they remained unaffected.

As one of the core equipment of the photovoltaic power generation system, benefiting from the rapid development of the global photovoltaic industry, the energy storage inverter industry has maintained ...

Following a blackout in the south-eastern part of Continental Europe on 21 June, ENTSO-E has set up an Expert Panel and has invited ACER and relevant regulators in the region to join it.

Future-Proofing Europe's Grids: ENTSO-E's vision for the European Grids Package Read the Recommendations in Detail
