The analysis does not just look at Uganda in isolation but considers how global trends are influencing and opening up new opportunities, notably driven by rapidly evolving clean technology costs and ...

OverviewHydroelectricityBackgroundThermal powerOil and natural gasSolar energyPower sales to neighboring countriesSee alsoThe country's hydropower potential is an estimated 2,200 megawatts. Poor maintenance during the politically unstable 1980s resulted in a drop in production at the Owen Falls Dam (now Nalubaale Power Station), at the mouth of the White Nile, from 635.5 million kilowatt-hours in 1986 to 609.9 million kilowatt-hours in 1987, with six of ten generators broken by the end of 1988. The 200 megawatt Kiira Hydroelectric Power Station

In October 2013, construction of the 183 megawatt Isimba Power Station began, approximately 40 kilometres (25 mi) downstream of Bujagali, at a budgeted cost of approximately US\$590 million, as a ...

High tariffs, deemed energy payments, and costly refinancing have cemented the 250MW Bujagali Hydropower Dam in Jinja district as Uganda's most expensive hydropower project.

Uganda paid UGX 798Bn in deemed energy for Bujagali Dam due to grid limits, high tariffs, and refinancing challenges. No relief expected until 2032.

Uganda on Thursday commissioned its largest electricity generation plant, a 600 megawatt (MW) power plant built on the River Nile that cost \$1.7 billion, financed with a loan ...

Achieving these targets requires substantial investments, estimated at USD 245 billion for new generation capacity, as outlined in the Energy Policy 2023. This amounts to an annual ...

A major boost to Uganda's energy capacity is now the Karuma Hydropower Station which commenced commercial operations on June 12, 2024, with an installed capacity of 600 MW. This ...
