-----

Imagine a weapon so powerful that it could knock down enemy aircraft without firing a single bullet! The Wind Cannon was a bizarre yet fascinating invention,...

Since he can't get a warrant and has no obvious (physical) health issues, I think the only thing left to do is to find a device which can detect and prove the use of a sound weapon. He has been dealing with ...

The cannon worked by the ignition of critical mixtures of hydrogen and oxygen in molecular proportions as near as possible. The powerful explosion triggered off a rapidly-ejected ...

Firing the vortex cannon is straightforward, but since we're dealing with flammable gas, pay close attention to the method, both for best results and greatest safety.

Ultimately, the wind cannon remained a footnote in the history of World War II, exemplifying the experimental spirit of the time and the lengths to which nations would go to secure ...

The operator proudly claims it uses "wind power," and suddenly you're wondering - why aren't these things generating electricity? Let's cut through the confusion surrounding pneumatic wind cannons ...

A model of this cannon projecting air by means of a mix of oxygen and hydrogen was found at the test center in Hillersleben. The Germans working on-site announced that the device ...

The cannon was tested at the Hillersleben gun range, resulting with the cannon breaking a 25 mm (0.98 in) wooden board at a distance up to almost 200 m (660 ft). [1]
