-----

Innovation reduces total capital costs of battery storage by up to 40% in the power sector by 2030 in the Stated Policies Scenario. This renders battery storage paired with solar PV one of the most ...

Global battery (cell) manufacturing capacity grew almost 30% in 2024 to reach more than 3 TWh - three times EV and battery storage demand in the same year. About 85% of global manufacturing capacity ...

Despite the rapid decrease in battery prices and continued innovation, the degree of concentration in battery supply chains has raised security concerns among governments in recent ...

Battery storage capability by countries, 2020 and 2026 - Chart and data by the International Energy Agency.

Strong policy incentives for EVs and battery storage have spurred market expansion, paving the way for widespread adoption across the globe. ...

After solid growth in 2022, battery energy storage investment is expected to hit another record high and exceed USD 35 billion in 2023, based on the existing pipeline of projects and new capacity targets ...

The IEA's latest flagship report sees the world's need for energy services expanding in all scenarios, with demand rising across the transport, buildings and industry sectors, and increasingly for data and ...

Strong growth occurred for utility-scale battery projects, behind-the-meter batteries, mini-grids and solar home systems for electricity access, adding a total of 42 GW of battery storage capacity globally.
