I'm not really sure how to ask my question, but there are classifications for weather conditions for MVFR, IFR, and LIFR. The FAA also has weather minimums for flying VFR in the different airspaces...

LiFePO₄, Lithium Iron Phosphate AA 3.2V 600mAh Rechargeable Battery (1FR 14505 or IFR 14500 - must be 3.2V) Check your manufacturer's information to be sure these will fit in your device.

Experience high-performance and long cycle life with Topwell's 3.2V 600mAh LiFePO₄ 14500 IFR 14500 rechargeable battery. Get yours today!

FAR 91.167 (Simplified): For IFR flights in an airplane, you must carry enough fuel to: Fly to your destination airport, descend, fly an instrument approach down to DA/MDA and land. If ...

19 Helicopter IFR operations do exist, but the short answer to the thrust of your question is: helicopter IFR is inherently more dangerous than fixed-wing IFR due to the lack of stability.

The batteries must not be charged above a voltage of 3.65 volts, otherwise there is a risk of fire and explosion. It is advantageous to charge the batteries only up to approx. 3.5 volts, as this significantly ...

Unless otherwise authorized by the FAA, no pilot may takeoff from a civil airport under IFR unless the weather conditions at time of takeoff are at or above the weather minimums for IFR takeoff ...
