“We have been able to build a fair amount of wind and solar without adding new transmission, but we're really kind of running up to the limits, especially for wind, because there's not ...

Alaska's lag in solar power is understandable, given its geographic location. As the northernmost state in the U.S., with parts of Alaska situated in the Arctic Circle, the state experiences ...

North Carolina has seen a significant surge in electricity generated from solar energy in the last few years. In 2017, for example, solar energy became the primary source of renewable...

Solar power includes solar farms as well as local distributed generation, mostly on rooftops and increasingly from community solar arrays. In 2024, utility-scale solar power generated 219.8 terawatt ...

Despite supply-chain problems amid the lingering effects of the pandemic, 2022 saw major increases in solar and wind power in the United States, though that growth varied by state, according ...

California leads as the top solar state. With over 54 GW of solar installed, enough energy to power over 15 million homes. Texas has the fastest growing solar economy with the largest utility-scale solar and ...

Local governments across the U.S. are blocking new clean energy plants. See the best locations for wind and solar power, and where it's being stopped.

Yes, there is solar power generation in northern regions due to advancements in technology, increasing demand for renewable energy, and government initiatives. 2. The ...
