Highjoule's cabinet is IP55-rated, which means strong waterproof and dustproof performance. Rain, dust, salty air -- none of that gets inside. The enclosure is made from anti ...

Battery Energy Storage Systems, or BESS, help stabilize electrical grids by providing steady power flow despite fluctuations from inconsistent generation of renewable energy sources and ...

A group of nationwide experts that includes Stanford scientists is solely focused on making water the crucial component in future batteries, according to a university news release on the ...

Part of that optimization is in the liquid electrolyte: standard lithium-based batteries use organic solvents mixed with salts to shuttle charge around. Theoretically, batteries can use water...

Fortunately, there were no injuries, air quality in the area remained at non-hazardous levels, and there was no contamination of drinking water.

Let's spill the water (metaphorically, of course) on why this matters. Flooded lead-acid batteries - the workhorses of energy storage - require H₂O like marathon runners need electrolytes.

Seeking to tackle this issue, researchers in Australia have devised an innovative battery that relies on water rather than a flammable electrolyte.

Researchers have developed an aqueous organic redox flow battery (AORFB) demonstrating stable performance with no considerable capacity decay over 220 charge-discharge ...
