The Yesha project (est. 2024) is a first of its kind agro-solar platform that optimizes land use to produce high-yield agriculture alongside reliable green electricity.

The integration of solar-plus-storage systems is particularly crucial for Israel's energy security, especially in conflict-prone regions. These systems ensure a stable electricity supply, ...

This reservoir will be the first in Israel to feature an energy storage facility with a capacity of about 60 megawatt-hours alongside approximately 24 megawatts of floating solar power on the reservoir's walls.

Due to extensive research and development, Israel has pioneered solar energy production and storage. A few good examples of such a feat are the large-scale plants in the Negev desert.

Here's the kicker: photovoltaic (PV) plants without storage can't solve the "sunset problem" - when energy production plummets exactly when demand peaks. That's where Israel's new generation of ...

This report aims to develop a comprehensive resource of Israel's research and development in the solar energy field, as well as to gain an overall understanding of the future research and development of ...

This strategic move highlights Israel's vision for deepening its renewable energy capabilities while addressing the need for grid expansion and energy storage solutions.

The government has announced plans for Israel's first stand-alone energy-storage facility, consistent with the aims underpinning a revised draft climate bill (legally enshrining targets for ...
