Which country produces the most lithium in the world?

However, the largest lithium reserves, around 9 million tons, are located in Chile. These are not yet being accessed as they could be, so Australia leads the world in production. Discover population, economy, health, and more with the most comprehensive global statistics at your fingertips.

Which countries are leading in lithium production & reserves?

Many countries, such as Chile, Australia, and Argentina, as well as others, are leading in production and reserves of lithium, which helps shape global strategies around mining, trade, and technology. These countries will play a central role in shaping the world's sustainable future, particularly in terms of production and reserves of lithium.

How many tonnes of lithium are there in the world?

The US Geological Survey estimates that there are around 21 million tonnes of lithium reserves around the globe, though this estimate is hard to make accurately due to the fact that lithium can be found in both solid ore and fluid brine. Australia is currently the largest lithium producer in the world.

Which countries produce the most lithium ion batteries?

Australia, Chile and China are the top three for lithium production by country. Zimbabwe has also risen significantly in the ranks, moving from sixth in 2023 to fourth in 2024. As the EV lithium-ion battery market continues to grow, it's likely these countries will vie for larger roles in supplying the metal in the years to come.

Australia stands as the world's largest lithium producer, contributing 52% of global production. The country extracts lithium primarily from hard-rock mines, particularly the mineral spodumene, while ...

In this article, we explore the top 8 countries leading the world in lithium production and reserves, shaping future strategies around mining, ...

In this article, we explore the top 8 countries leading the world in lithium production and reserves, shaping future strategies around mining, technology, and sustainable development.

In 2024, Australia produced 88,000 metric tons of lithium, making it the world's largest producer of lithium. Although the country tops the list, year-over-year production decreased just over 4...

The chart compares mine production measured as tonnes of lithium metal content (Li). Values are presented as

rounded harmonised figures for cross-country comparability.

Global demand for lithium is exploding, fueling efforts to explore new sources and stirring jostling by countries over potential production. Here are the top 10 lithium-producing countries in the ...

Chile, Argentina, and Bolivia form the so-called "lithium triangle", which are large lithium deposits that span across these three countries. While Bolivia has huge lithium resources, it has ...

While lithium production in China is comparatively low, it is the largest consumer of lithium due to its electronics manufacturing and EV industries. It also produces more than three-quarters of ...
