What is Mingyang smart energy's OceanX?

Mingyang Smart Energy's OceanX, which the company says is the world's largest single-capacity floating wind power platform, has started operating at the Qingzhou IV offshore wind farm in Yangjiang, China, where it was installed this summer.

What does Mingyang do?

Mingyang aims to aid in the worldwide transition to sustainable energy with innovative floating offshore wind technologies. These include the MySE 5.5MW and MySE 7.25MW systems, along with an advanced 16.6MW (OceanX double-rotor floating wind turbine).

How much power does Mingyang floater generate?

The platform's turbines feature counter-rotating blades which Mingyang says increases power generation by 4.29 per cent. With a generation capacity of 16.6 MW, the floater is capable of producing 54 GWh annually, enough to power 30,000 households, according to the company.

What is Mingyang smart energy?

By clicking sign up, you confirm that you accept this site's Terms of Use and Privacy Policy MingYang Smart Energy is set to install the world's largest floating wind turbine, Ocean X, capable of producing 54 million kWh annually.

Mingyang"s 16.6 MW floating wind turbine begins operation in China. Chinese company Mingyang Smart Energy has put into operation what is said to be the world"s largest capacity floating ...

Mingyang aims to aid in the worldwide transition to sustainable energy with innovative floating offshore wind technologies. These include the MySE 5.5MW and MySE 7.25MW systems, ...

These ultra-large turbines significantly improve wind energy efficiency and are equipped with smart operation and maintenance systems for remote monitoring and fault detection, making ...

China is racing to develop a new generation of wind farms that can not only survive tropical cyclones, but also harness their power.

China"s largest onshore wind power base starts full-capacity production in North China"s Inner Mongolia autonomous region on Sunday, said its operator China General Nuclear Power ...

Mengxiang wind power generation

The world"s first dual-headed wind turbine is now operational off the coast of China, it can power 30,000 homes with clean energy annually.

Discover Mengxiang, a state-of-the-art deep-drilling vessel by China Geological Survey. With a range of 15,000 nautical miles and advanced lab facilities, it is set to revolutionize offshore oil, ...

The Xinglong project features 20 wind turbines, each with a capacity of 10 MW, making it the largest inland wind farm in China in terms of single-unit capacity. With an annual green power output of 560 ...
