-----

Solar and batteries can meet 90% of Mexico's total electricity demand with just 6% excess supply. Solar power will be central to reaching 45% clean electricity in Mexico by 2030, ...

The state-owned utility is driving more than 1,500 MW of new clean generation and energy storage capacity nationwide. The expansion of the Puerto Peñasco photovoltaic complex is ...

According to the regulations promulgated in March 2025, all new solar and wind power projects must be equipped with battery systems equivalent to 30% of their installed capacity, with a ...

Mexico is seeing a surge of large-scale solar and battery storage proposals across multiple states following an October decree that sets clearer rules for private energy investments.

Mexico's energy sector stands at a critical crossroads. While the country boasts immense potential in solar and wind resources, the path to a sustainable and secure energy future is still hampered by a ...

Thanks to the country's geographical conditions, Mexico has great potential for solar and wind energy, which makes it an ideal candidate for the implementation of energy storage systems to ...

State-owned utility CFE is constructing a 190MW battery storage unit co-located with a 1GW solar PV project, which is due for completion in 2028 (Energy Storage News, 2023).

Renewable energy resources like solar and wind fluctuate, making energy storage systems (ESS) important for balancing supply and demand. In Mexico, which has abundant solar and wind ...
