What is EDGE data center power architecture?

Our Edge data center power architecture, helps achieve just that. The distributed power architecture is able to meet the demands of data centers, both today and in the future, by providing high-power density in a modular solution that can grow with a data centers' computing needs.

What are edgerack integrated micro data center cabinets?

The EdgeRack integrated micro data center cabinets were manufactured to solve networking problems common to organizations across the globe. They're suitable for businesses big and small and are deployable in both traditional and non-traditional IT environments.

What is a modular data center?

With modular data centers, DataBank can extend our Data Center Evolved experience virtually anywhere. These modular, micro data centers provide a self-contained, secure, SOC-2 certified facility that can be turned up in a matter of weeks -- beneath a 5G cell tower or on a rooftop -- to put your applications and data as close as possible to end users.

What is edge distributed power architecture?

Increased safety. Enhanced power reliability. The highly reliable Edge distributed power architecture provides a cost-effective solution to backup power needs in data centers by utilizing compact DC power supplies mounted inside - on the side (vertically) - of each frame.

House your entire edge computing infrastructure in a single secure, prefabricated micro data center cabinet with self-contained cooling, monitoring, & more.

ArcTiv Edge-Series Cabinets are designed for protecting and managing networking devices commonly used in PoE+, IIoT and Edge-Computing applications.

POD enclosures protect equipment from physical and environmental conditions found in factories, warehouses and other edge computing locations. Power and data cables are separated from cooling ...

Explore what Edge computing is and how it (and the right IT enclosure system) can handle scalability, security, protection, disruptors, and standalone solutions.

The highly reliable Edge distributed power architecture provides a cost-effective solution to backup power
