Recently, Namibia has placed a ban on the export of raw minerals. Instead, choosing to process them into market-ready materials used for the production of batteries.

As global demand for renewable energy solutions surges, Namibia is emerging as a key player in energy storage battery manufacturing. This article explores how the country leverages its natural resources ...

Mining executives, speaking at an EU-Namibia conference on critical minerals, praised Namibia's investor-friendly policies and renewable energy resources but stressed the need for substantial ...

The project features a 45 MW / 90 MWh BESS facility, representing the country's largest battery, and is part of the broader Transmission Expansion and Energy Storage (TEES) program.

Andrada Mining CEO Anthony Viljoen, whose company recently commissioned a lithium pilot plant at its Uis mine in western Namibia, said the country could use its collaboration with the EU ...

Namibia's ambitions to become a manufacturing hub for battery metals key to the global transition to clean will require huge investments in infrastructure to support processing facilities ...

Namibia's Okanjande graphite project could benefit from a newly launched, Germany-funded research and development programme aimed at building an independent and environmentally ...

This industrial park is expected to provide companies with the requisite infrastructure for efficient battery metals processing. If Namibia successfully establishes itself as a manufacturing hub ...
