Right now, the US has about 83 GWh of energy storage, with nearly 500,000 battery installations helping to keep the grid running smoothly. But demand for electricity is only going up, and...

For instance, at the end of 2023, there were over 150.5 GW of wind power and 137.5 GW of solar photovoltaic (PV) total in the United States. To help put this number in perspective, it's important to ...

In 2024, generators added a record 30 GW of utility-scale solar to the U.S. grid, accounting for 61% of capacity additions last year. We expect this trend will continue in 2025, with 32.5 GW of new utility ...

The logistics real estate firm Prologis says that rooftop solar and storage installations on its buildings can now generate 500 megawatts (MW) of energy - a milestone that puts the company ...

The project will be developed under Soleil Renewable Energy, LLC, and will be one of the top five largest power-producing solar facilities in the state once complete. The Soleil Renewable ...

Global installed energy storage capacity by scenario, 2023 and 2030 - Chart and data by the International Energy Agency.

Rising electricity demand and aging infrastructure are shaping how power systems are managed. Prologis has achieved more than 1 GW of solar energy supported by battery storage ...

According to the U.S. Solar Market Insight 2024 Year in Review report released today by the Solar Energy Industries Association (SEIA) and Wood Mackenzie, solar and storage account for ...
