What are onsite solar installations?

Onsite solar installations are renewable energy systems deployed directly on your business premises. These systems offer immediate and visible benefits while giving you direct control over your energy generation.

Should businesses choose onsite or offsite solar?

As businesses work toward reducing their carbon footprints and energy costs, they face a pivotal decision: should they opt for an onsite renewable energy solution, like a rooftop solar installation, or consider an offsite option, such as grid-connected Open Access solar?

How can on-site solar PV & energy storage improve sustainability?

To achieve sustainability goals while meeting the increasing electricity demands of electrification, organizations are pairing on-site solar PV generation with on-site energy storage. These systems, which are considered as "behind-the-meter" (BTM) systems, allow facilities to maximize the benefits of on-site renewable generation.

What are offsite solar solutions?

When physical space is limited or energy requirements exceed onsite generation capacity, offsite solar solutions provide a viable alternative. These arrangements allow businesses to source renewable energy through the grid, offering flexibility and scalability without the constraints of physical installation.

Onsite energy with solar for outdoor use What is on-site solar? On-site solar refers to a solar energy system that is installed directly on the property where the energy will be used. This is the most ...

Our global renewables practice offers the strongest network of skilled legal advisers anywhere in the world. We are recognized as a market leader in the renewable energy sector and ...

several options are available for on-site renewable generation, and the best solution can vary from one location to another, this resource focuses on solar photovoltaic (PV) systems as a ...

The system under study consists of a network of interconnected GDCs, which process both online and batch jobs during a time horizon, onsite renewable technologies, including solar PVs ...

Wattstor: your partner for renewable onsite energy systems We design, build, pay for, operate and optimise renewable onsite energy systems, and sell you the electricity they generate at ...

Solar panels are becoming an increasingly common sight on rooftops and car ports as more landlords and owner-occupiers get on board with the idea of onsite renewable energy. From ...

The Onsite Energy Program leverages a regional network of Technical Assistance Partnerships to help industrial facilities and other large energy users increase the adoption of onsite ...

What is onsite solar? Onsite solar is an asset installed in the same location where the energy generated will be consumed. For each kilowatt-hour (kWh) the onsite solar asset produces, a ...
