What is a good DC/AC ratio for a solar inverter?

Because the PV array rarely produces power to its STC capacity, it is common practice and often economically advantageous to size the inverter to be less than the PV array. This ratio of PV to inverter power is measured as the DC/AC ratio. A healthy design will typically have a DC/AC ratio of 1.25.

What is SolarEdge DC optimized inverter?

SolarEdge developed an intelligent inverter solution that changed the way power is harvested and managed in photovoltaic (PV) systems. The SolarEdge DC optimized inverter maximizes power generation while lowering the cost of energy produced by the PV system.

How do I choose a solar array?

The battery capacity (kWh) should also be considered for off-grid systems when sizing the solar array. This is not straightforward, as numerous variables must be considered. A general guide is to use the minimum peak sun hours (PSH) of your location in Winter.

Be sure to account for the depth of discharge (DoD) to ensure the battery's longevity, especially when using lead acid batteries, as they are more sensitive to DoD. Determine the ...
