That's where a well-designed photovoltaic bracket component classification table becomes your secret weapon. Think of it as the LEGO instruction manual for solar arrays, helping you sort through:

Components of solar photovoltaic brackets: Solar photovoltaic bracket is a special bracket designed for placing, installing, and fixing solar panels in solar photovoltaic power generation ...

Mounting Brackets are the primary components that attach the solar panels to the mounting surface. They come in various types depending on the mounting surface (roof, ground, pole, etc.).

Photovoltaic modules (PV modules) are clearly in this classification and as such its vulnerability to wind loads is one of the main concerns of manufacturers and users as well. ...

When choosing a photovoltaic bracket, it is necessary to comprehensively consider the specific needs of the photovoltaic project, site conditions, environmental factors, and cost ...

According to the different materials used in the main force-bearing rod of the PV bracket, it can be divided into aluminium alloy bracket, steel bracket and non-metallic bracket ...

The installation selection of photovoltaic ground brackets is mainly based on factors such as the fixing method of the bracket, terrain requirements, material selection, and the weather ...

Saving construction materials and reducing construction costs provide a basis for the reasonable design of photovoltaic power station supports, and also provide a reference for ...
