Apple aims to install or procure enough renewable electricity to match every watt used to charge its products by 2030. From adding rooftop solar panels at its corporate offices to partnering ...

The Fort Churchill Solar Array is a 19.9 megawatt (MWAC) concentrator photovoltaics power station near the city of Yerington in Lyon County, Nevada. It is the largest assembly of SunPower C7 tracker low concentration PV (LCPV) technology in the United States. The facility was constructed for Apple Inc. to service its Reno Technology Park Data Center.

Apple's data center in Maiden, North Carolina is the location of the nation's largest end-user-owned solar photovoltaic array, and the array produces onsite renewable energy to the ...

Now Apple says it's finished getting the rest of its facilities running on 100% green power-from its new Apple Park headquarters, which has one of the largest solar roofs on the planet, to its distribution ...

A particularly noteworthy feature of this store is its innovative photovoltaic (PV) walkable floor installed on the rooftop, a clear indicator of Apple's commitment to innovation, sustainability and renewable ...

When Apple announced its global facilities now run on 100% renewable energy, photovoltaic panel installation became the cornerstone of this environmental revolution. The tech titan's solar arrays ...

Slated for completion by the end of 2024, the project, named Casta&#241;o Solar, marks a significant stride in Apple's ambitious agenda to achieve carbon neutrality across its entire value ...

Apple is making new investments in solar power in the U.S. and Europe to help address the electricity customers use to charge and power their Apple devices.
