Positioned as a "non-destructive testing equipment for comprehensive performance of PV modules", it integrates two core functions: electroluminescence (EL) imaging and current-voltage (IV) testing, ...

The Lecos LXG60PRO offers a unique solution for solar panel diagnostics, delivering reliable, high-sensitivity EL images that enable precise identification of defects in solar cells and modules.

Looking for a versatile EL tester that adapts to different solar panel types? The ECOLAB EL offers detailed electroluminescence for Photovoltaic Panels.

It can stably and safely supply power to photovoltaic modules, with a visual power display for more assured detection and easier portability. It includes a circuit safety module, support for high-low ...

The portable EL tester is designed to detect hidden cracks inside solar panels, ensuring efficient power generation of photovoltaic modules. With a compact design, user-friendly operation, and high ...

Finding defects early in solar panels makes them better and lowers the chance of warranty problems. Inline and offline inspection systems let you check each solar cell before it is ...

With the Electroluminescence EL Tester, you can quickly identify and address hidden defects in photovoltaic panels, ensuring optimal energy efficiency and longevity of solar installations.

The portable EL detector is used to detect the hidden cracks, fragments, virtual welding, black film, broken grid and mixed file and other defects of photovoltaic cell modules.
