Because of the increasing demand for photovoltaic energy and the generation of end-of-life photovoltaic waste forecast, the feasibility to produce glass substrates for photovoltaic application by recycling ...

The functionalization of the glass that could help to limit or reduce the temperature of the solar cells is an interesting approach. In this paper, we explore the effect of glass surface patterns in ...

The National Glass Association (NGA) has published an updated Glass Technical Paper (GTP), FB39-25 Glass Properties Pertaining to Photovoltaic Applications, which is available for free ...

Weathering of float glass can be categorized into two stages: "Stage I": Ion-exchange (leaching) of mobile alkali and alkaline-earth cations with H^+/H_3O^+ , formation of silica-rich surface ...

In this work, three textured glass surfaces are described and simulated numerically over a wide range of AOIs. The anti-reflection effect and light trapping effect are provided to analyze the ...

A standardized model is presented for evaluating the efficiency of spectral converters integrated into PV glass, systematically assessing spectral absorption and emission properties, ...

NGA has published an updated Glass Technical Paper (GTP), FB39-25 Glass Properties Pertaining to Photovoltaic Applications, which is available for free download in the NGA Store.

This chapter examines the fundamental role of glass materials in photovoltaic (PV) technologies, emphasizing their structural, optical, and spectral conversion properties that enhance ...
