Wind energy accounted for about 10% of total U. S. utility-scale electricity generation and 48 of the electricity generation from renewable sources in 2023.

Newsletter The International Renewable Energy Agency (IRENA) produces comprehensive, reliable datasets on renewable energy capacity and use worldwide. Renewable energy statistics 2025 ...

t. Wind Energy Overview Only 2 to 5 percent of the land is needed for . he turbines themselves. T. e vast majority of land used to host turbines can continue to be used for its original purposes, such as ...

Wind supplies 57% of Denmark"s electricity generation and over 20% in ten other countries. 7 Global wind additions reached a record 117 GW in 2023. 7 In 2024, onshore installations surpassed 100 GW ...

Share of wind power in electricity generation and consumption. The world"s installed wind power capacity now meets well over 10% of global electricity demand - and much more than nuclear ...

In 2022, wind turbines were the source of about 10.3% of total U.S. utility-scale electricity generation. Utility scale includes facilities with at least one megawatt (1,000 kilowatts) of electricity ...

How does wind energy compare to other energy sources, and what are its pros and cons? These comprehensive wind energy statistics and data, based on the latest 2026 research, will ...

Wind generates 8.4% of global electricity as a clean energy source. Compare Wind power generation by country with 2024 data and track the low-carbon transition.
