This year's forecast is a downward revision from 2024 Globally, we have lowered our renewable energy growth forecast for 2025-2030 by 5% compared to last year, to reflect policy, regulatory and market ...

Today, wind power is one of the fastest-growing renewable sectors on Earth, and it's evolving into new, unexpected forms. Land-based wind farms have become familiar sights, but their ...

The International Renewable Energy Agency (IRENA) is an intergovernmental organisation supporting countries in their transition to a sustainable energy future.

Discover how breakthrough innovations in solar, wind, hydrogen, and storage are transforming the future of renewable technologies worldwide.

Renewable energy will play a key role in decarbonizing our energy systems in the coming decades. But how rapidly is our production of renewable energy changing? What technologies look most promising ...

Renewable energy resources make up 26% of the world's electricity today, but according to the IEA its share is expected to reach 30% by 2024. The resurgence follows a global slowdown in ...

Renewable energy sources, such as wind and solar, emit little to no greenhouse gases, are readily available and in most cases cheaper than coal, oil or gas. Energy is at the heart of the...

We explore the data to see where the clean energy transition stands today, from rising investment and job growth to grid needs and critical mineral demand.
