This interactive publication offers an overview of the transition to a renewables-based, flexible power system, benchmarks wind and solar growth against the region's climate pledges and ...

Off-grid distributed energy systems (DES) using renewable energy could be a solution to this problem, thanks to the increasing availability of small power generation and renewable energy ...

There are certain roadblocks in the progress of solar PV deployment in ASEAN. This paper aims to investigate the solar PV policies in the ASEAN region over the past decade. Also, an ...

Biomass and small hydropower plants, though often overlooked in the larger energy narrative, paint their own tableau of success in decentralisation. In particular, they generate power in ...

By drawing on global experience while electricity demand rises rapidly, Southeast Asia can avoid common development pitfalls and build power systems that deliver secure, affordable electricity while ...

While Cambodia plans to expand investment in large-scale solar farms, growth in small rooftop and commercial and industrial solar has been slow due to policy challenges.

About This report tracks solar and wind generation in ASEAN between 2015 and 2022, and analyses the additional capacity needed by 2030 to align with the International Energy Agency ...

With vast, untapped renewable resources, East Asia can accelerate its clean energy transition--boosting competitiveness, creating millions of jobs, and strengthening energy security. A ...
