The standardisation of energy efficiency, high levels of insulation, and the installation of renewable energy equipment at houses will bring a variety of benefits to the lives of Tokyo residents.

Having revised the relevant ordinance in December 2022, the Tokyo Metropolitan Government will require solar panels to be installed in all newly built residences from April 2025.

As an area of major energy consumption, Tokyo will accelerate efforts to establish a foundation for a decarbonized society and ensure energy security in an integrated manner in order to ...

Based on the energy conservation scenario, we examined a scenario in which 100% renewable energy is used for final energy consumption in all sectors, and conducted an energy model analysis using ...

We expect the spread of ZEH to stimulate insulation, energy conservation, and renewable energy initiatives, so we would like the TMG to go ahead with the measures.

In recent years, Tokyo has implemented a series of policies and initiatives focused on reducing carbon emissions, increasing energy efficiency, and promoting renewable energy sources such as solar and ...

In a landmark move, Tokyo has announced a new regulation requiring solar panels on new buildings, set to take effect in April 2025. This directive is a key part of the city's comprehensive ...

From April 2025, housing suppliers that provide an annual total of at least 20,000 sq m of floor space within Tokyo must meet new building mandate. Requirements include wall and window cladding...
