Sesotec systems empower recycling companies to meet these high standards: they inspect shards, eliminate contaminants like ceramics, stones, or porcelain, and sort materials by glass color and type.

Our glass sorting systems separate cullet to create high-quality single-color fractions out of mixed-color glass fragments. Even heat-resistant and special leaded glass can be safely and reliably removed. ...

How to prepare glass before sorting? Before technology enters the picture, you start with preparation, and this early stage is directly connected to the processes used in modern facilities ...

It enables you to achieve sorting accuracy exceeding 99.99%, ensuring your sorted glass contains no impurities that could affect subsequent glass processing. The glass sorter achieves ...

Specialty industries, such as electronics and solar panels, require precise sorting of multi-layered or coated glass. Optical systems can differentiate subtle differences in surface...

Featuring advanced sensors and algorithms, it offers real-time monitoring and customizable sorting parameters, suitable for various glass materials. Widely applicable, it facilitates efficient and eco ...

Powerful combination of High-Resolution RGB Camera System and optional NIR Camera System accurately detect glass colors (clear, green, brown, blue) and contaminants (ceramics, metals, PVC)

Accurate glass sorting machines for recycling. High-speed, high-accuracy optical sorters. Perfect for sorting glass by color. Ideal for bottle recycling.
