Yes, it is still possible that clean energy can power the world by 2050, and if we get there, solar will become the single largest source of electricity globally.

Solar experienced the fastest growth among all power generation technologies in terms of electricity output, three times as much as wind power, which was ranked second.

Global solar installations are on track for another record year. In the first six months of 2025, the world added 380 GW of new solar capacity -- 64% higher than during the same period in ...

Data and analysis including a list of solar power in every country in the world, countries with the most solar power, and countries that generate the highest percentage of their electricity from solar power.

The worldwide growth of photovoltaics is extremely dynamic and varies strongly by country. In April 2022, the total global solar power capacity reached 1 TW, increasing to 2 TW in 2024. The top ...

Solar electricity is growing rapidly, but can it really dominate the global energy system? Here is what it will take for us to power the planet on sunshine. Is solar power going to take over...

The amount of solar power in the world has been doubling roughly every three years, but because it came off a low base, it's hard to get a sense of how remarkable that growth is.

Looking ahead, solar energy is expected to significantly change the world's energy system, with forecasts saying it could generate half of the world's electricity by 2050.
