---

These two photovoltaic materials suffered a significant loss in power conversion efficiency upon injection molding. Yet, the technological maturity of in-mold electronics, currently demonstrated in relatively ...

Here, we present the first flexible organic solar cell modules embedded into 3D plastic parts through injection molding. The aim of this work is to demonstrate the high potential of in-mold organic ...

The presentation at Fakuma 2023 marked a turning point, sparking significant interest from the injection moulding industry in the direct use of solar power through DC grids. In response, ...

The injection molding industry is now very interested in the direct use of solar power via DC grids. As a result, Wittmann and inesco are currently evaluating and processing a number of ...

The first DC-capable injection molding machines have been sold. WITTMANN has pioneered DC technology in the injection molding industry. It is the first supplier to offer injection ...

The injection molding machine and robot are operated directly with solar energy via a DC voltage intermediate circuit. Only one year later, at the Fakuma 2023, Wittmann again presented a ...

Our solar plastic molding systems use free solar heat from heliostats instead of expensive fossil fuel to make plastic parts. Our Solar Rotational Molding (SRM&#174;) factories are complete systems - just add ...

JSW IMM is built with Renewable Energy to reduce JSW"s own carbon emission in assembly plant in Hiroshima, Japan Newly adopted Solar Power Generation System 2,400m2 of Solar System installed ...
