Who makes SunPower solar panels?

Here's what you need to know about each of them: The SunPower M Series are currently manufactured by Maxeon Solar Technologies, which took over SunPower's manufacturing arm in 2019. This series offers the highest output (aka wattage) and most efficient panels in SunPower's lineup (but they do come with a premium price tag as well).

Does SunPower still make solar panels?

Originally named Eos, the company later rebranded as SunPower and became a driving force in solar technology. Though SunPower no longer manufactures panels directly--having spun off its panel production to Maxeon Solar Technologies in 2020--it continues to design solar systems and energy storage solutions.

How much do SunPower solar panels cost?

SunPower solar panels cost between \$3.48 and \$4.10 per Watt on the EnergySage Marketplace - that's \$20,880 to \$24,600 for a 6 kW system before the federal solar tax credit. In 2019, SunPower spun off the manufacturing arm of its business into Maxeon Solar Technologies - however, as of 2023, Maxeon only manufactures some of SunPower's solar panels.

How efficient are SunPower solar panels?

The efficiency of your SunPower solar panels will vary depending on the specific model you choose for your system. SunPower panel efficiency ranges from 21.7% to 22.8% (excluding the U Series), making them some of the most efficient solar panels currently available.

SunPower Solar Panel Review SunPower is a premium solar panel manufacturer known for producing the highest-efficiency solar panels on the market. With over 35 years of innovation, their panels ...

Imagine a home or business where solar panels capture energy, intelligent batteries store and manage electricity, and your entire property becomes a smart, responsive energy environment.
