Will the London Underground be powered by solar energy?

Transport for London (TfL) has announced plans to power the London Underground with renewable energy by developing solar farms connected directly to the network and is procuring for a delivery partner in a contract worth £175M.

Can a solar farm connect to the London Underground?

Transport for London (TfL) is seeking a delivery partner to work collaboratively to develop purpose-built solar farms to connect to the London Underground network, with opportunities for a broader connection to TfL's estate. Bidders are invited to participate in a competitive tender, which opens from 31 October.

What is the TFL solar project?

The project will explore developing and connecting solar infrastructure near the TfL network, facilitating development of assets at scale, contributing to the wider ambition to use 100 per cent renewable source electricity across TfL's operations by 2030.

Can TfL build a purpose-built solar facility?

TfL is inviting bids for a delivery partner to collaborate on creating purpose-built solar facilities, which will also provide an opportunity for broader connections across its estate.

You can still search and apply for contracts without an account. To find and apply for high value contracts in the UK (usually above £139,688 including VAT) use the Find a Tender service instead.
