---

Running three-phase power to data center cabinets yields more useable power than single-phase, but balance is difficult to master.

The space-saving PDU is easy to move and adapt to the future demands of the data center. The PDU offers superior power protection and monitoring, and the flexibility and scalability to match your actual ...

High density computing with increased server implementation, greater equipment densities, increased power demands, cost reduction initiatives, green directives and redundancy are driving the demand ...

Three phase power is used in data centers to support high density IT applications and minimize the cost of the cables delivering that power. This paper discusses the importance of load balancing across ...

USPWR provides proven, best in class Cabinet Power Distribution Units (PDUs) including 3 Phase PDUs and Single Phase PDUs for all your critical power and data center needs.

Designed to work on both non-raised and raised floors in a data center, with scalable architecture and front access only design, this 3-phase PDU provides unparalleled ease of use.

The Vertiv(TM) PowerUPS 9000 is a high-power density, energy-efficient, and compact uninterruptible power supply (UPS) system. It is designed to support IT applications from traditional computing to ...

As a result, server enclosures are requiring more power than ever before and demanding effective, efficient power distribution, which is essential to managing power capacity.
