Is Weibo a new mode of communication in China?

Weibo is a brand new mode of communication in China. The growth of Weibo rose due to the mix of technological improvement and socially significant events. This study contributes to investigating the complexity of PO dissemination and the evolution of Weibo in China. To achieve this, a super network model is constructed.

How do we find the core users of Weibo?

The analysis reveals that the core users of each Weibo can be found by constructing a propagation relationship network based on the retweets, followers, and forwarding volume of each Weibo user.

Is Weibo a microblogging platform?

Weibo, as a microblogging platform in China, is a vibrant ecosystem where information spreads rapidly and public sentiment changes rapidly (Yu et al., 2021). Weibo's structure, characterized by followers, re-tweets, and comments, plays an important role.

Does Weibo have a combination mechanism?

A combination mechanism is comprehensively proposed based on the model parameters and the influencing factors of public sentiment. Taking a real event as an example, the strength and effect of the guidance strategy are observed. Weibo also has emerging challenges and this study does not address the mechanisms needed to address these issues.
